

BEDDINGPRO[®]*

Designed by **Double R Manufacturing** - Engineered with Quality

"The Ultimate for laying down straw and silage."

Located in the heart of Prince Edward's agricultural region, Double R Manufacturing has developed an innovative approach to laying straw and silage with the BeddingPro[®]. The design features of the BeddingPro[®] maximizes its function. It can be used for traditional farming uses along with berry crops and vineyards.

BeddingPro[®] benefits:

- **designed for confined areas**
- **minimum dust and noise**
- **precise and controlled spreading**
- **reduces laying and spreading time**
- **easily attaches to any front end loader or three point hitch**
- **attaches quickly and easily to any tractor**
- **care free maintenance**

Every farmer knows the effort of continually changing and fluffing bedding in the barn. The BeddingPro[®] uses a rotating drum and bale rotating assembly kit which automatically chews and fluffs straw and silage as it's laid, resulting in extended changing times and fresher bedding.
